

Mehran Mostafavi, mehran.mostafavi@universite-paris-saclay.fr tél : 06 75 93 94 84, Birth 31 July 1962

I'm 62 years old. I'm married and I have a child. I am a professor (PRCEX, Exceptional rank) at the University Paris-Saclay. I am the scientific deputy director at the CNRS at the INC.

I conduct my research activities at the Physical Chemistry Institut (UMR 8000) in Orsay. I am in charge of the "Mutualized Research Means" project of the ELYSE platform (centre for ultrafast kinetics) and I am the head of the "Condensed phase elementary chemical acts" research team which includes two CNRS researchers, two PhD students and one post-doctoral student. I am a Fellow Professor of Tokyo University of Japan since 2010. The main

research activity of the last 5 years concerns the reactivity of the electron (before its solvation) and the hole (H_2O^+) in water. This is an ultrafast chemistry (less than one picosecond) induced in water by ionizing radiation.

Recently I am interesting on CO_2 conversion by radiolytic method and mainly interesting on the mechanism of CO_2 reduction on the surface of nanoparticles.
